Address of Property Owned: 500-508 N. Roy Reynolds Dr.

I am opposed to covering up MORE land with buildings and pavement unless – adequate water runoff and channeling is included.

The Reynolds Crossing development to the North of the subject FLUM 26-01 property has already caused damage to my property with excessive water runoff multiple times.

Republic Engineering and Development Services who is submitting this request is the same firm that developed the inadequate drainage plan for the Reynolds Crossing Development.

Please do not allow them to continue to develop property that causes damage to properties at a lower elevation than their development with excessive water runoff.

I am not opposed to the development IF they include improving the current water retention and waterway through my property and repair the damage that prevents me from being able to access the back of my property. The multiple culvert land bridge that had been there since the early 1970's, over 50 years with no problems, has been washed away and created a 3-5 foot deep ravine preventing access.

Reasonable, honorable men would agree to repair damage that they have caused. I ask that they do the repairs.
